Key cover

SWEET CLICK CONTROL

Electronic control, giving the perception of a digital device, also in traditional type systems.

CONTROL IN STYLE

Modernity and tradition, for an exclusive personality. The central gem lights around the chrome finish key.

ROCKER SWITCHES

Traditional choice, is the ideal continuation of BTicino wiring devices offer.

ENERGY EFFICIENCY

BTicino innovation, always more and more attentive to the environment

Respect for the environment and compliance with the new building regulations, saving energy without

compromising on modern life comfort is today possible. BTicino offers solutions for an environmentally

intelligent management of lighting, and for the control of domestic energy consumptions.

ADJUST THE LIGHT LEVEL WITH MAXIMUM EFFICIENCY

With the new universal dimmer, it is also possible to control **compact fluorescent lamps and LEDs**, with current savings of up to 65% when compared with other types of lamps.

	Filament 10 W	Halogen - 70 W (= 100 W filament)	LED - 17 W (= 100 W filament)
Traditional switch Maximum consumption in 8 hours	300 kW	210 kW -30%	60 kW -80%
Universal dimmer Maximum consumption in 8 hours with 25% level adjustment	100 kW	70 kW -30%	20 kW* -80%

With a constant 100 W light level (consumption of 100 W, filament = 70 W, halogen = 17 W LED), it is possible to obtain savings up to 65% by adjusting the dimmer to 25%.

* -65% when compared with the consumption of a LED lamp controlled by a standard switch

A COMPLETE ENERGY CONSUMPTION AND PRODUCTION CHECK-UP

Display the consumptions of your own home - electricity, water and gas - and the production of energy and hot water obtained with **photovoltaic panels systems, or with solar thermal systems**. The information can then be used to make your system as efficient as possible, reducing **waste and faults**.

HEATING AND COOLING ONLY WHEN REQUIRED

With BTicino temperature control systems (both traditional and MyHOME) it is possible to:

- individually set the temperature of each single room
- split the system into zones

- activate the heating only when required, preventing it from being switched on with the windows open. In addition, thanks to the zone temperature control, the building **gains one energy class** and users save on their bills.

Double technology Green Switch
- infrared and ultrasounds
- ECO MODE -
- AUTO MODE -

Passive infrared movement sensor - AUTO MODE -

Loads which can be driven

The table allows identification of the actuator device depending on what it is to be used for, the electrical features of the load to be controlled and the installation features.

Warning: Unless otherwise specified in the instruction leaflet, a 10 A thermal magnetic protection must be fitted on the power line to the actuators.

Notes:

- 1) power factor corrected fluorescent lamps, energy saving lamps, discharge lamps.
- 2) in order to calculate the actual power of the load connected to the actuator, it will be necessary to take into account the transformer performance. For example, when connecting a dimmer to a 100 VA ferromagnetic transformer with 0.8 performance, the actual load power will be 125 VA.
- 3) The transformer must be loaded at its rated power, or in any case never below 90% of its rated power. It will be preferable to use a single transformer, rather than several transformers in parallel. For example, it will be preferable to use one single 250 VA transformer with 5 x 50 W spotlights connected, rather than using 5 x 50 VA transformers in parallel, with one 50 W spotlight each.
- 4) the  symbol shown on the actuators refers to the shutter motor reducers.
- 5) only compatible with lamps with 1/10 V Ballast.
